USE CASE SCENARIO:

## **How a Multi-Clinic Healthcare Network Increased Patient Revenue by 19% With VoxyAgent's Emotionally Intelligent Patient Support**

A busy multi-provider doctor's office relied on a VoIP phone system to handle patient calls but faced ongoing challenges with high call volume, missed appointment reminders, and staff tied up with repetitive outbound calls. Front-desk teams spent hours each day confirming appointments, following up on missed visits, and returning patient messages, which pulled attention away from in-office care and patient experience.

In a scenario like this, layering an AI call agent such as VoxyAgent on top of the existing VoIP system, through a unified communications partner like VoxConnect UC, could automate appointment confirmations, no-show follow-ups, and routine outbound patient outreach. This approach could reduce staff call burden, improve appointment attendance, and ensure patients receive timely communication, all without changing the clinic's current phone infrastructure or adding new headcount.
